

Our pneumatic formwork vibrators are lightweight, easy to handle and can be steplessly regulated by means of the air volume flow. They immediately reach their nominal speed when the air feed is switched on. Thanks to their compact size they can be easily mounted anywhere on the formwork.

Model	VR-56
Rotational Speed	17500 min ⁻¹
Centrifugal Force	25000N
Air Consumption	1.05 m ³ /min
Weight	3.5kg
Mounting Dimension	a-124 b-55 øs-12.5
Overall Dimension	c-140 e-80 f-70 g-76

VAQ4000

These units were primarily developed for use as shutter vibrators, tampers and surface finishers for concrete. They are also effective as an aid to industry for vibrating hoppers, compaction tables, chutes, knock-out grids and many other applications where high frequency is desirable.

Model	VAQ4000
Centrifugal Force	40000N
Working Moment	0.29Nm
Frequency	15200vpm
Air Consumption	1800L/min
Weight	14.5kg
