IVC-F65L is 65 litres multi-functional dry industrial vacuum cleaner. Its manual filter oscillating screener can quickly remove dust covered in the surface of the filter. The filter can be cleaned automatically in a very short time by manually pulling the handlebar. This leaves no blocking inside the filter.

**IVC-33L**

IVL-33L is generated by the floor grinding machine enters the first chamber, it is cyclonically separated. The heavy dust goes down and the finer travel up. Most of the dust can be collected in the first chamber then airstream goes into the second chamber, where remaining dust is filtered.

IVC-55L is 55 litres industrial vacuum dust cleaner. With the patented cyclone technology, above 92% of dust is separated by the first filter easing the stress of the second filter. The two high-efficiency filter cleaning technology allows continuous operations in high airflow mode.
